

# Application Protocol

- Since TCP (and Python) gives us a reliable **socket**, what do we want to do with the **socket**? What problem do we want to solve?
- Application Protocols
  - Mail
  - World Wide Web

Source: [http://en.wikipedia.org/wiki/Internet\\_Protocol\\_Suite](http://en.wikipedia.org/wiki/Internet_Protocol_Suite)

# HTTP - Hypertext Transfer Protocol

- The dominant Application Layer Protocol on the Internet
- Invented for the Web - to Retrieve HTML, Images, Documents, etc
- Extended to be data in addition to documents - RSS, Web Services, etc..
- Basic Concept - Make a Connection - Request a document - Retrieve the Document - Close the Connection

<http://en.wikipedia.org/wiki/Http>

# HTTP

The HyperText Transfer Protocol is the set of rules to allow browsers to retrieve web documents from servers over the Internet

# What is a Protocol?

- A set of rules that all parties follow so we can predict each other's behavior
- And not bump into each other
  - On two-way roads in USA, drive on the right-hand side of the road
  - On two-way roads in the UK, drive on the left-hand side of the road

# Getting Data From The Server

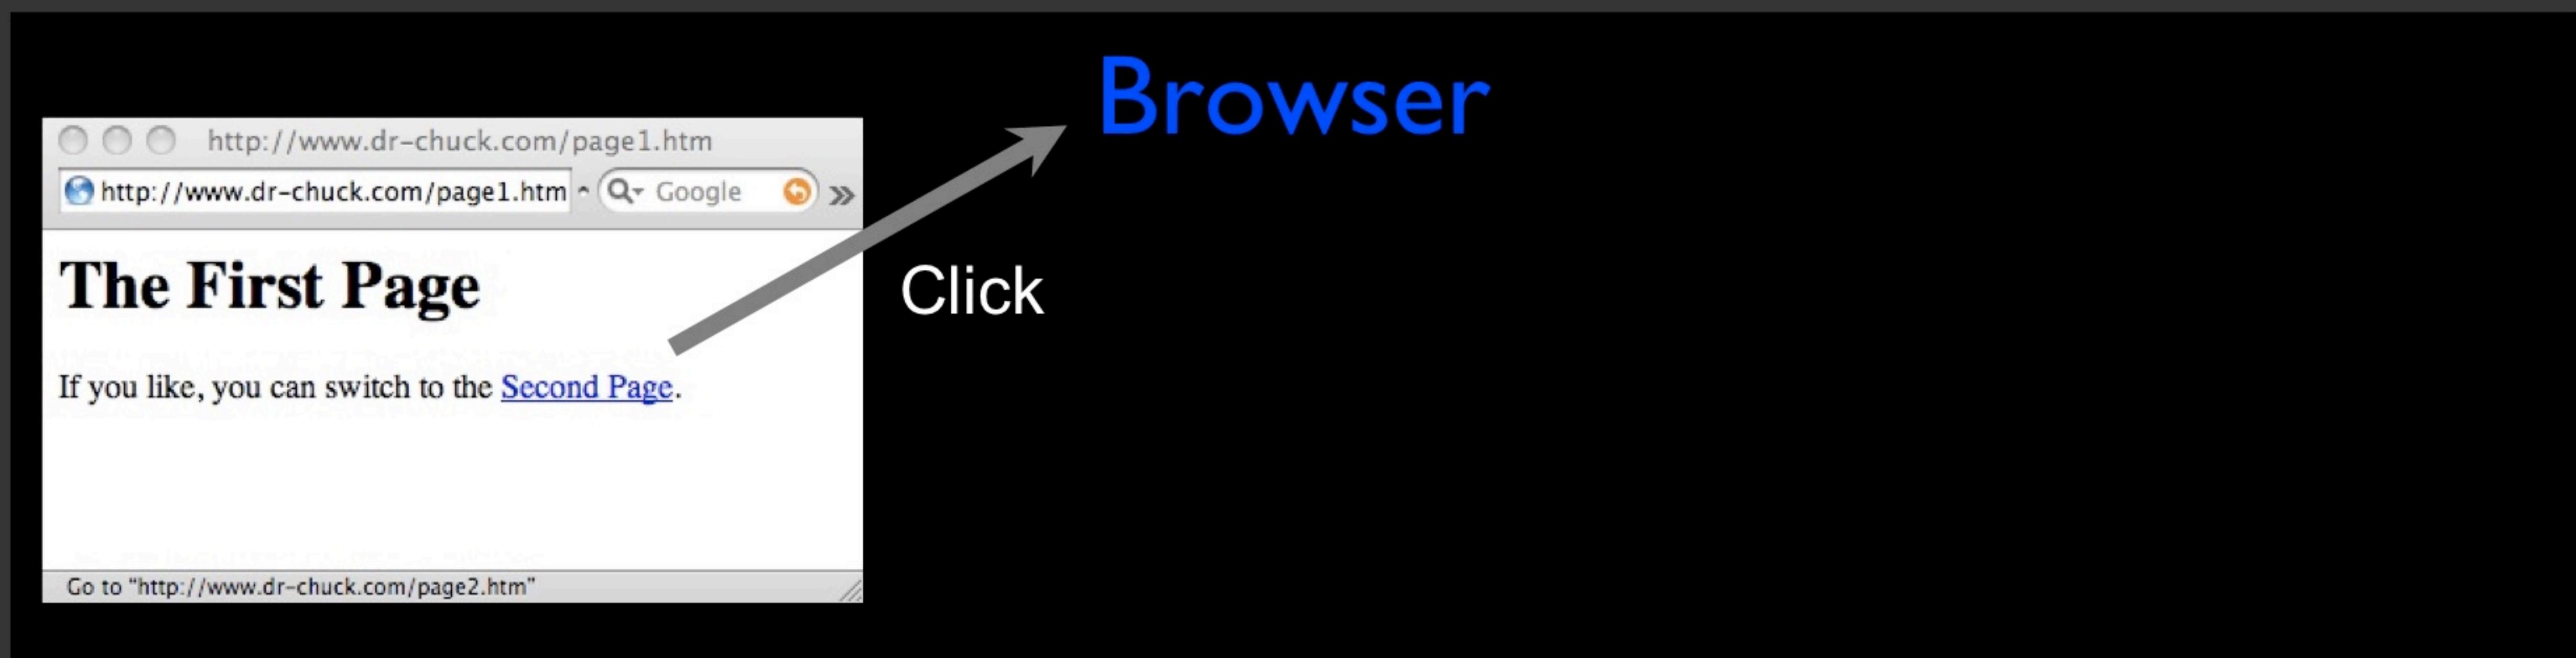

Each time the user clicks on an anchor tag with an href= value to switch to a new page, the browser makes a connection to the web server and issues a “GET” request - to GET the content of the page at the specified URL

The server returns the HTML document to the Browser which formats and displays the document to the user.

## Browser

Request

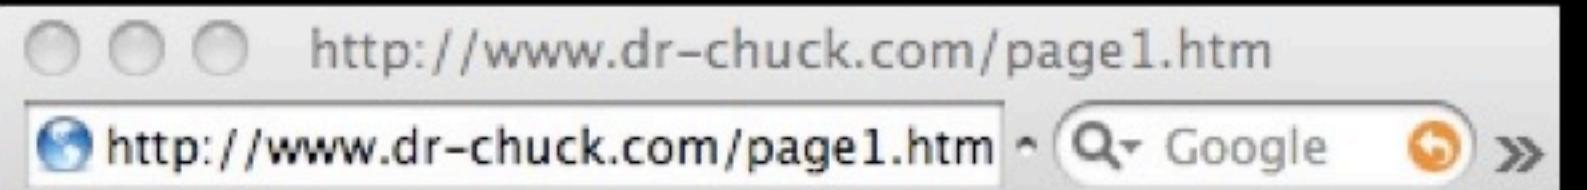

GET http://www.dr-chuck.com/page2.htm

Web Server

80

Browser

The First Page

If you like, you can switch to the [Second Page](#).

Go to "http://www.dr-chuck.com/page2.htm"

Click

Request

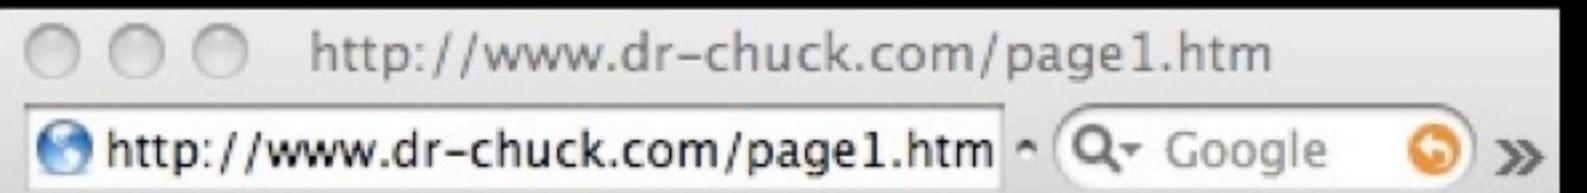

GET http://www.dr-chuck.com/page2.htm

Web Server

80

Browser

The First Page

If you like, you can switch to the [Second Page](#).

Go to "http://www.dr-chuck.com/page2.htm"

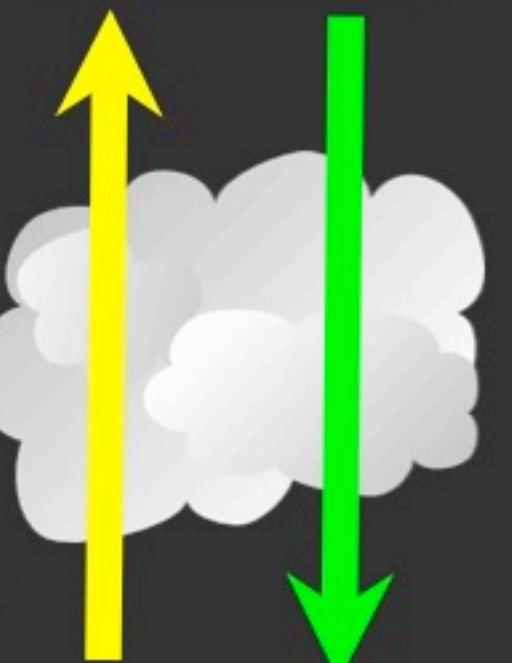

Click

Request

GET http://www.dr-chuck.com/page2.htm

Web Server

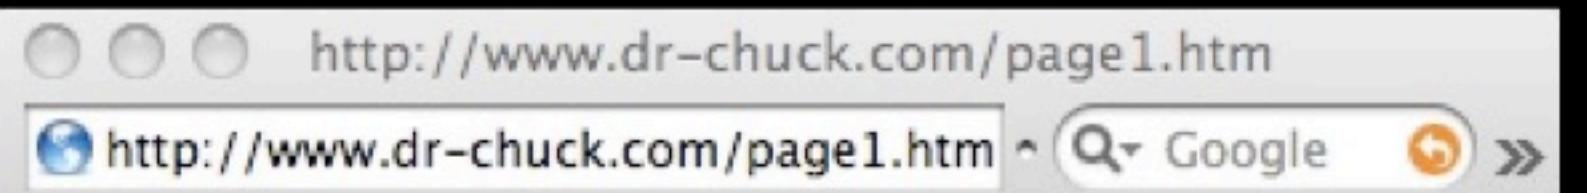

80

Response

<h1>The Second Page</h1><p>If you like, you can switch back to the <a href="page1.htm">First Page</a>.</p>

Browser

The First Page

If you like, you can switch to the [Second Page](#).

Go to "http://www.dr-chuck.com/page2.htm"

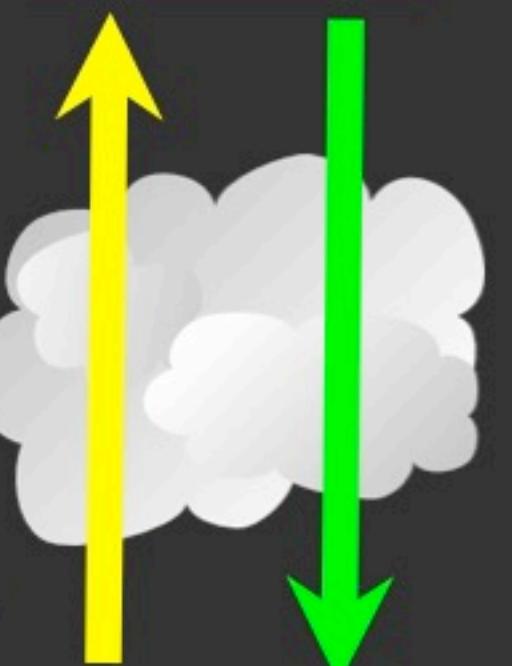

Click

Request

GET http://www.dr-chuck.com/page2.htm

Web Server

80

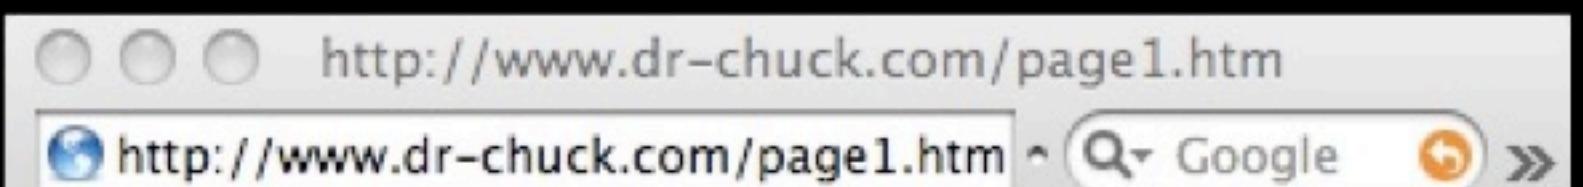

Response

```
<h1>The Second Page</h1><p>If you like, you can switch back to the <a href="page1.htm">First Page</a>.</p>
```

Browser

Click

Render

The First Page

If you like, you can switch to the [Second Page](#).

Go to "http://www.dr-chuck.com/page2.htm"

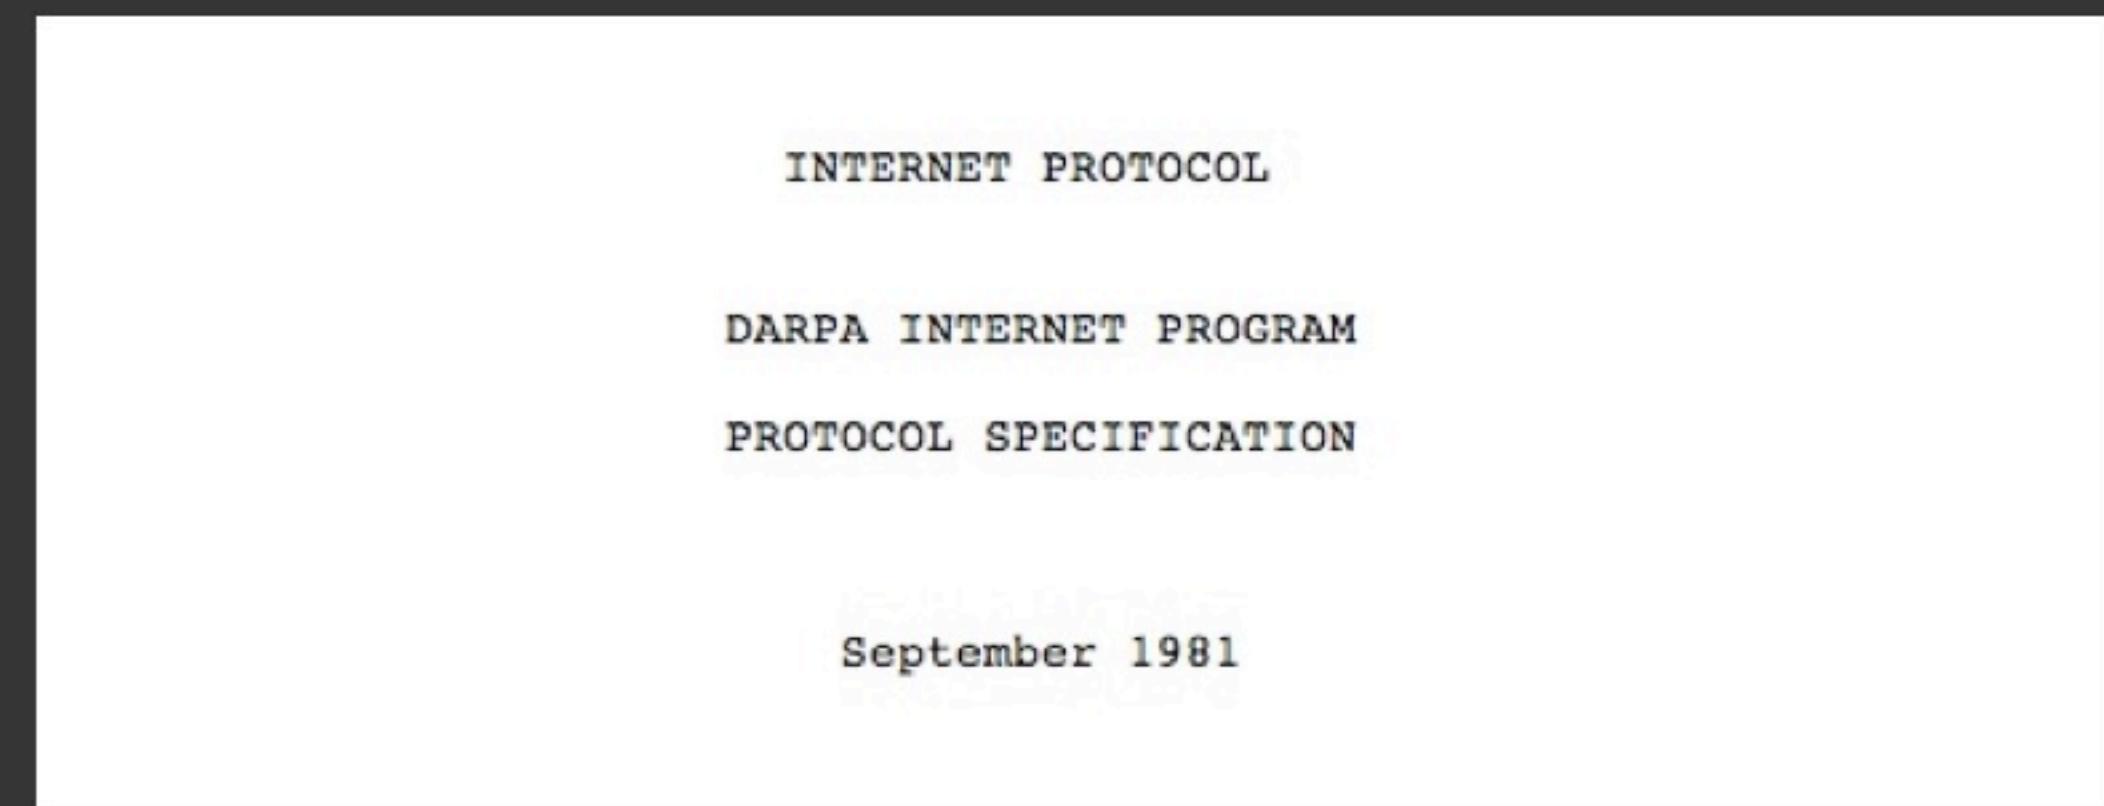

The Second Page

If you like, you can switch back to the [First Page](#).

# Internet Standards

- The standards for all of the Internet protocols (inner workings) are developed by an organization
- Internet Engineering Task Force (IETF)
- [www.ietf.org](http://www.ietf.org)
- Standards are called “RFCs” - “Request for Comments”

The internet protocol treats each internet datagram as an independent entity unrelated to any other internet datagram. There are no connections or logical circuits (virtual or otherwise).

The internet protocol uses four key mechanisms in providing its service: Type of Service, Time to Live, Options, and Header Checksum.

### Hypertext Transfer Protocol -- HTTP/1.1

#### Status of this Memo

This document specifies an Internet standards track protocol for the Internet community, and requests discussion and suggestions for improvements. Please refer to the current edition of the "Internet Official Protocol Standards" (STD 1) for the standardization state and status of this protocol. Distribution of this memo is unlimited.

#### Abstract

The Hypertext Transfer Protocol (HTTP) is an application-level protocol for distributed, collaborative, hypermedia information

## 5 Request

A request message from a client to a server includes, within the first line of that message, the method to be applied to the resource, the identifier of the resource, and the protocol version in use.

```
Request      = Request-Line ; Section 5.1
              *(( general-header
                | request-header
                | entity-header ) CRLF) ; Section 5.3
                CRLF
              [ message-body ] ; Section 4.3
```

### 5.1 Request-Line

The Request-Line begins with a method token, followed by the Request-URI and the protocol version, and ending with CRLF. The elements are separated by SP characters. No CR or LF is allowed except in the final CRLF sequence.

```
Request-Line = Method SP Request-URI SP HTTP-Version CRLF
```

# Making an HTTP request

Connect to the server like `www.dr-chuck.com`"

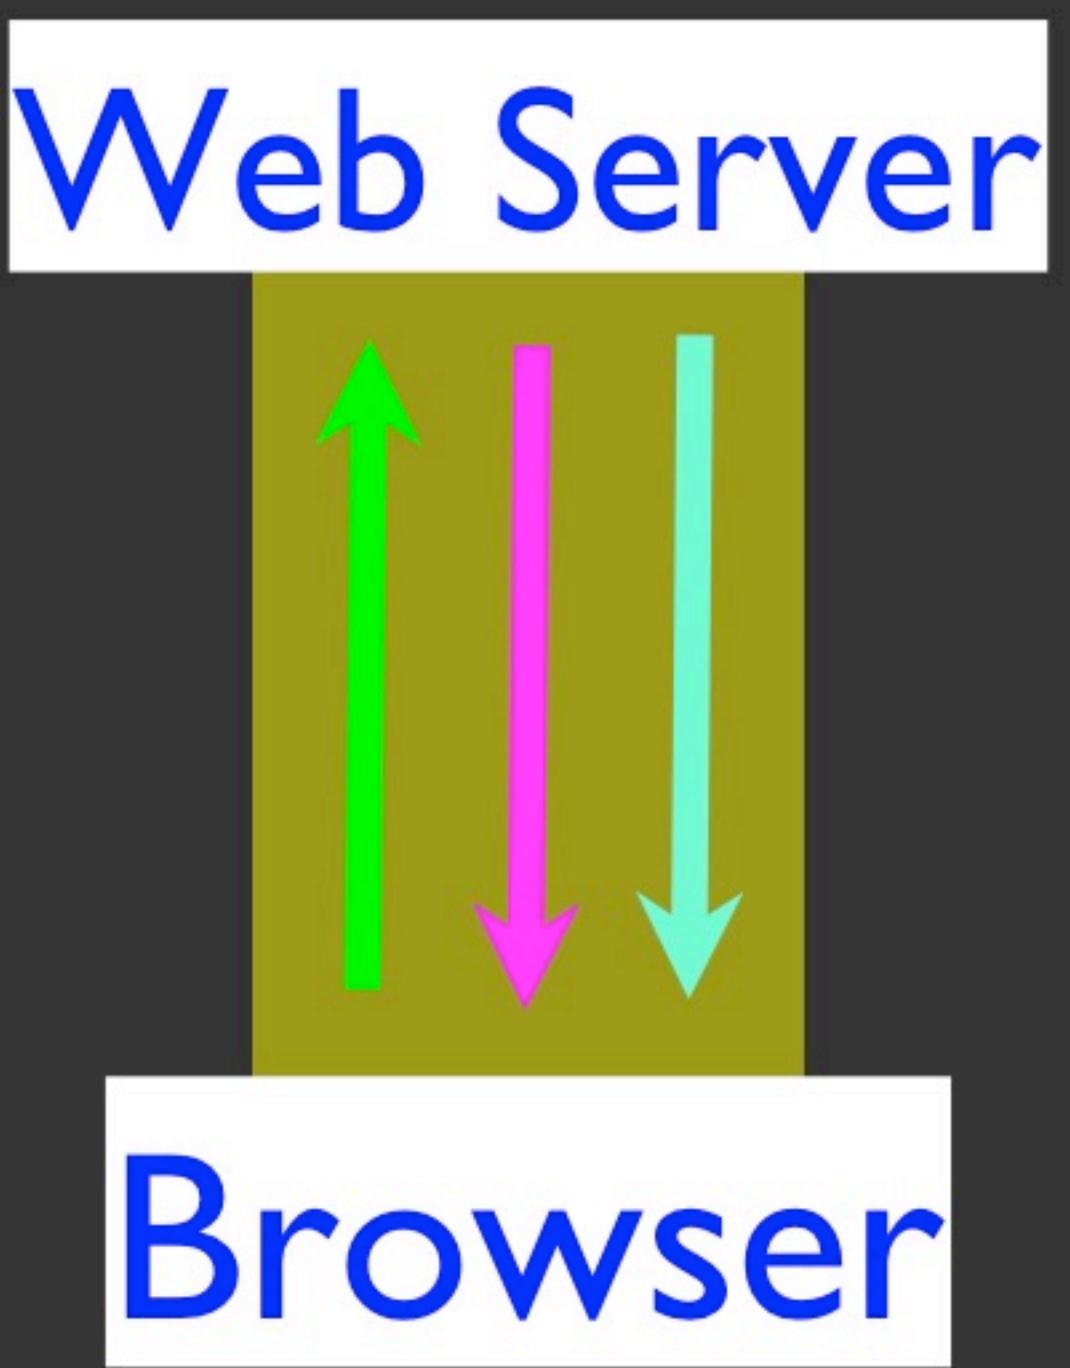

Request a document (or the default document)

- *GET http://www.dr-chuck.com/page1.htm HTTP/1.0*
- *GET http://www.mlive.com/ann-arbor/ HTTP/1.0*
- *GET http://www.facebook.com HTTP/1.0*

```
$ telnet www.dr-chuck.com 80
Trying 74.208.28.177...
Connected to www.dr-chuck.com. Escape character is '^]'.
GET http://www.dr-chuck.com/page1.htm HTTP/1.0
```

```
HTTP/1.1 200 OK
Date: Thu, 08 Jan 2015 01:57:52 GMT
Last-Modified: Sun, 19 Jan 2014 14:25:43 GMT
Connection: close
Content-Type: text/html
```

```
<h1>The First Page</h1>
<p>If you like, you can switch to
the <a href="http://www.dr-chuck.com/page2.htm">Second
Page</a>.</p>
Connection closed by foreign host.
```
